

Appl. No. 10/002,438
Amdt. dated 11/24/2004
Reply to Office Action of 08/30/2004

IN THE SPECIFICATION:

Please amend the paragraph that starts on page 12, line 18 and ends on page 12, line 30 as shown below.

Fig. 8 illustrates a flow chart of a process used by the present invention to bookmark a Web page. The process starts as soon as the bookmark folder is accessed (step 800). Two tests then are continuously being made. The first one is to determine whether the user wants to bookmark a Web page the usual way. If so, then the URL of the displayed Web page is stored with the title of the page if there is one (steps 815 and 820). The second test is to determine whether the user wants to bookmark a section of the Web page. If so, the size of the window, the position of the scroll boxes and the font attributes of the text will all be ~~store~~ stored in conjunction with the URL of the page and the page title if there is one (steps 805 and 810).
